

APPENDIX A

NESTED GRID MODEL ANALYSIS WEATHER CHARTS

This appendix provides Nested Grid Model analysis weather charts for the 1997 and 1998 episode days analyzed in this report. These charts were used to characterize the synoptic meteorology during ozone episodes. The characterization of the episodes is presented in Section 4 of this report. Note that the charts are in UTC time.

(Note: This electronic version of the original report contains the first page of forty-nine pages of Nested Grid Model (NGM) analysis weather charts presented in the original Appendix A. The first page is provided as an example of the data used to support the analysis discussed in the report. The historic NGM meteorological data can be acquired by requesting a hard copy of the original report or viewing individual days for areas discussed at <http://www.arl.noaa.gov/ready/arlplota.html>.)
